CORRECTED

Desk Statement

In coordination with TCEQ, the EPA issued an Administrative Order to the Intercontinental Terminals Company (ITC) under its authority of the Clean Water Act. The Order requires ITC to take immediate action to address imminent and substantial threats posed by the potential discharge of oil and/or hazardous materials from the facility into the nearby bayou. The Order also requires ITC to control air emissions at the incident and in surrounding communities. ITC will also be required to take any additional response actions as deemed necessary by the Federal On-Scene Coordinator.

Talking Points

- Using a federal enforcement order, the EPA is requiring ITC to address chemical releases into both air and water to protect human health and the environment by ITC.
- TCEQ also directed ITC to provide a response plan to address fire and vapor suppression, as well as how to safely dewater secondary containment to minimize environmental concerns and run off from the site.
- This Order requires ITC to conduct activities identified by the EPA for the current discharge and to mitigate any possible discharges that pose an imminent and substantial threat to the public or threaten nearby waters.
- EPA has instructed ITC to ensure the remaining material in the tanks is appropriately removed by any means necessary as to prevent a release of hazardous substances, pollutants or contaminants, or a discharge of oil or hazardous substances.
- EPA is instructing ITC to evaluate any discharge into the nearby bayou that could potentially contain Per- and Polyfluoroalkyl Substances (PFAS).
- EPA has instructed ITC to remove the spilled material, including oil, hazardous substances, and fire fighting foam from the facility ditch and downstream waters such as Tucker and Buffalo Bayous, and the Houston Ship Channel. EPA has also instructed ITC to install the necessary barriers to prevent these materials, which potentially could contain PFAS, from migrating further downstream.
- EPA has instructed ITC to prevent the release of air emissions that will exceed concentrations harmful to human health and the surrounding environment.
- EPA has instructed ITC to continue air monitoring activities to determine if a release of a hazardous substance that could be harmful to human health has occurred. If any release is detected, immediately notify the appropriate federal, state, and local agencies, so appropriate measures can be taken to protect the surrounding communities.
- Administrative Order uses EPA's authority under Sections 311(c), (e) and (m) of the Clean Water Act.

David are these the most up to date? Its unlikely it'll come up for the Administrator in Cincinnati today but we should probably have them ready for him in case.

James is with him and can get him what he needs for this.

> The EPA issued an Administrative Order to the Intercontinental Terminals Company (ITC) under its authority of the Clean Water Act. The Order requires ITC to take immediate action address imminent and substantial threats possibly posed by discharging materials from the facility to the nearby Bayou. The Order also requires ITC to control air emissions at the incident and in surrounding communities. ITC will also be required to take any additional response actions as deemed necessary by the Federal On-Scene Coordinator.

>

>

> \* The US Environmental Protection Agency (EPA) continues to participate in Unified Command with Texas Commission on Environmental Quality (TCEQ), Harris County Pollution Control Services, and ITC.

> \* On March 23, 2019, ITC has placed additional boom along the ditch leading to Tucker Bayou and Buffalo Bayou.

> \* ITC continues to make improvements to the temporary clay containment wall on March 23, 2019.

> \* ITC continues to apply foam to the secondary containment and tanks to reduce emissions and reignition of hot spots on March 23, 2019.

> \* ITC has delayed the pumping of tank 80-7 and the pumping process is expected to start at approximately 3:00 pm on March 23, 2019.

> \* On March 23, 2019, portions of the ship channel remain closed due to elevated benzene levels.

> \* As of 12:00 pm on March 23, 2019, the ITC had laid approximately 27,000 feet of boom in Tucker Bayou and areas along Buffalo Bayou. Booming has been placed around sensitive marsh areas, the battleship, and other sensitive areas of concerns.

> \* EPA conducted surface water sampling on March 23, 2019. One sample was collected from Tucker Bayou (Location TB-1). The sample is being analyzed for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), Chemical Oxygen Demand (COD), and Oil & Grease.

> \* EPA will conduct additional water sampling on the afternoon of March 23, 2019 in the Houston Ship Channel/Buffalo Bayou near the San Jacinto State Historical Park and Lynchburg Reservoir and will be analyzed for Per- and Polyfluoroalkyl Substances (PFAS), VOCs, SVOCs, COD, and Oil & Grease.

> \* EPA conducted handheld air monitoring from March 23, 2019 (04:00 am) to March 23, 2019 (12:00 pm) at 17 locations. A result was reported above the detection limit at one location for total VOCs and at

the same location for benzene. Benzene was detected above the short-term Air Monitoring Comparison Values (AMCVs) for benzene (0.18 parts per million (ppm)). EPA will conduct additional air monitoring and deploy the Trace Atmospheric Gas Analyzer (TAGA) to determine if the short-term AMCVs for benzene continues to be exceeded.

- > \* On March 22, 2019, the Airborne Spectral Photometric Environmental Collection Technology (ASPECT) aircraft underwent maintenance and is ready for operations. EPA will conduct additional air monitoring and deploy ASPECT on the afternoon of March 23, 2019.
- > \* On March 23, 2019, the Rapid Assessment Teams (RAT) were deployed to visually assess and document impacts along the bayou.
- > \* ITC continued air monitoring in the communities around the facility. By 12:00 pm on March 23, 2019, ITC had taken 2338 VOC readings/104 detections, as well as 1720 benzene readings/104 detections. Since 12:00 am on March 23, 2019 there have been 360 benzene readings with 30 detections; 5 readings above 1 ppm and 359 VOC readings with 33 detections.
- > \* EPA continues to participate in the daily press conferences held at the Incident Command Post.

>

> March 22, 2019 1200 - March 23, 2019 0400

>

>

>

>

- > • EPA continues to participate in Unified Command with TCEQ, Harris County Pollution Control Services, and ITC.
- > • A partial breach of the tank farm containment wall on the northeast side near Tank 80-7 occurred at approximately 12:00 pm on March 22, 2019, to the ditched area and into Tucker Bayou. Additional boom has been placed along the ditch leading to Tucker Bayou, Tucker Bayou, and Buffalo Bayou. The Responsible Party's contractor has rebuilt the containment wall using clay material, but will continue to improve it during the day.
- > • At approximately 3:40 pm on March 22, 2019, three tanks reignited. The fire spread from the containment area through the breached containment wall into the ditch on Tidal Road. Foam was applied to the tanks and the ditch to fight the fire. A shelter in place recommendation was in effect for industrial neighbors, the Battleship Texas and Monument State Park. There was no shelter in place for the city of Deer Park.
- > • During and after the fire and the breach of the secondary containment, several readings of benzene above 1.0 ppm were detected (highest was 16.5 near National Tank Services) by the various entities conducting air monitoring through the afternoon and night time. These readings were located along the ship channel, Channelview.
- > • Foam continues to be applied to the secondary containment and tanks to reduce emissions and reignition of hot spots. At 3:00 am, approximately 145 totes (250 gal each) of foam were remaining. Approximately 200 additional totes are in route and will be arriving throughout the day.
- > • ITC will again attempt to start pumping product out of tank 80-7 (pyrolysis gasoline) to an empty tank within another tank farm.
- > • For safety purposes, there is no remediation actions taking place on the ship channel at night, but operations continued at night in the ditch area.

> • As of 12:00 am on March 23, 2019, the RP had laid approximately 8,500 feet of boom in Tucker Bayou and areas along Buffalo Bayou. Another 600 feet will be deployed early on March 23. Booming has been placed around sensitive marsh areas, the battleship, and other sensitive areas of concerns. Currently, they have about 5,000 feet of additional boom.

> • EPA conducted water sampling on March 22, 2019, in two locations in the drainage ditch feeding into Tucker Bayou and up by the Battleground park area. Samples will be analyzed for Chemical Oxygen Demand, VOCs, SVOCs, and oil/grease. Sampling was suspended after the breach in containment wall due to safety concerns from the containment breach.

> • The Airborne Spectral Photometric Environmental Collection Technology (ASPECT) aircraft found detections of acetone, butadiene, isobutylene, 1-butene, and isoprene. ASPECT found exceedances of the Texas comparison values on the afternoon of March 22, 2019. ASPECT has conducted a screening level assessment to evaluate the unreported or undetected releases of hazardous materials or contaminants at the Intercontinental Terminal Company (ITC) in Deer Park, Texas. The screening level results from ASPECT were compared to the ASPECT list of Texas Commission on Environmental Quality (TCEQ) short-term Air Monitoring Comparison Values (AMCVs) and found exceedances of the short-term AMCVs for butadiene (1.7 ppm) and isoprene (0.02 ppm).

> • The ASPECT aircraft is undergoing maintenance and is expected to be ready for operation at approximately 12:00 pm on March 23, 2019.

> • EPA conducted air sampling using the Trace Atmospheric Gas Analyzer (TAGA) from March 22, 2019 (12:00 pm) to March 23, 2019 (4:00 am). The TAGA analyzed the air samples for benzene, toluene and xylene. The TAGA air sampling results were compared to compared to the Texas Commission on Environmental Quality (TCEQ) short-term Air Monitoring Comparison Values (AMCVs) and found no exceedances of the short-term AMCVs for toluene and xylene. The TAGA air sampling results found exceedances of the short-term AMCV for benzene. These exceedances of the short-term AMCV for benzene partially correspond to the ITC site and have been shared with unified command and local officials.

> • EPA conducted handheld air monitoring from March 22, 2019 (12:00 pm) to March 23, 2019 (4:00 am) at 50 locations located in residential areas north of the ship channel as the wind was from the south/south-east. Results were reported above the detection limit at five locations for total volatile organic compounds (VOCs) and five locations for benzene. Benzene was detected at two of these locations above the short-term AMCVs for benzene (0.18 ppm). EPA will conduct additional air monitoring and deploy the Trace Atmospheric Gas Analyzer (TAGA) to determine if the short-term AMCV for benzene continues to be exceeded.

> • CTEH continued air monitoring and from March 21, 2019 12:30 pm to

> March 22, 2019 12:00 am, there were 344 VOC readings and 133 benzene readings (with 2 detections above 1.0 ppm) • Rapid Assessment Team (RAT) activities were cancelled on March 22, 2019 due to safety concerns after the containment breach.

> • EPA continues to participate in the daily press conferences held at the ICP.
